

The scatter plot displays two data series: blue circles and red asterisks. The x-axis, labeled 'number', ranges from 1 to 7. The y-axis, labeled 'count', ranges from 0 to 10. The blue circles are distributed across the plot, with a notable concentration at higher 'count' values (above 5) for 'number' values between 1 and 4. The red asterisks are more numerous and are concentrated at lower 'count' values (below 5) across the entire range of 'number'.
